

CRAFTYFY TESTING

Presented By:
Samitha Fathima Ershad

OVERVIEW

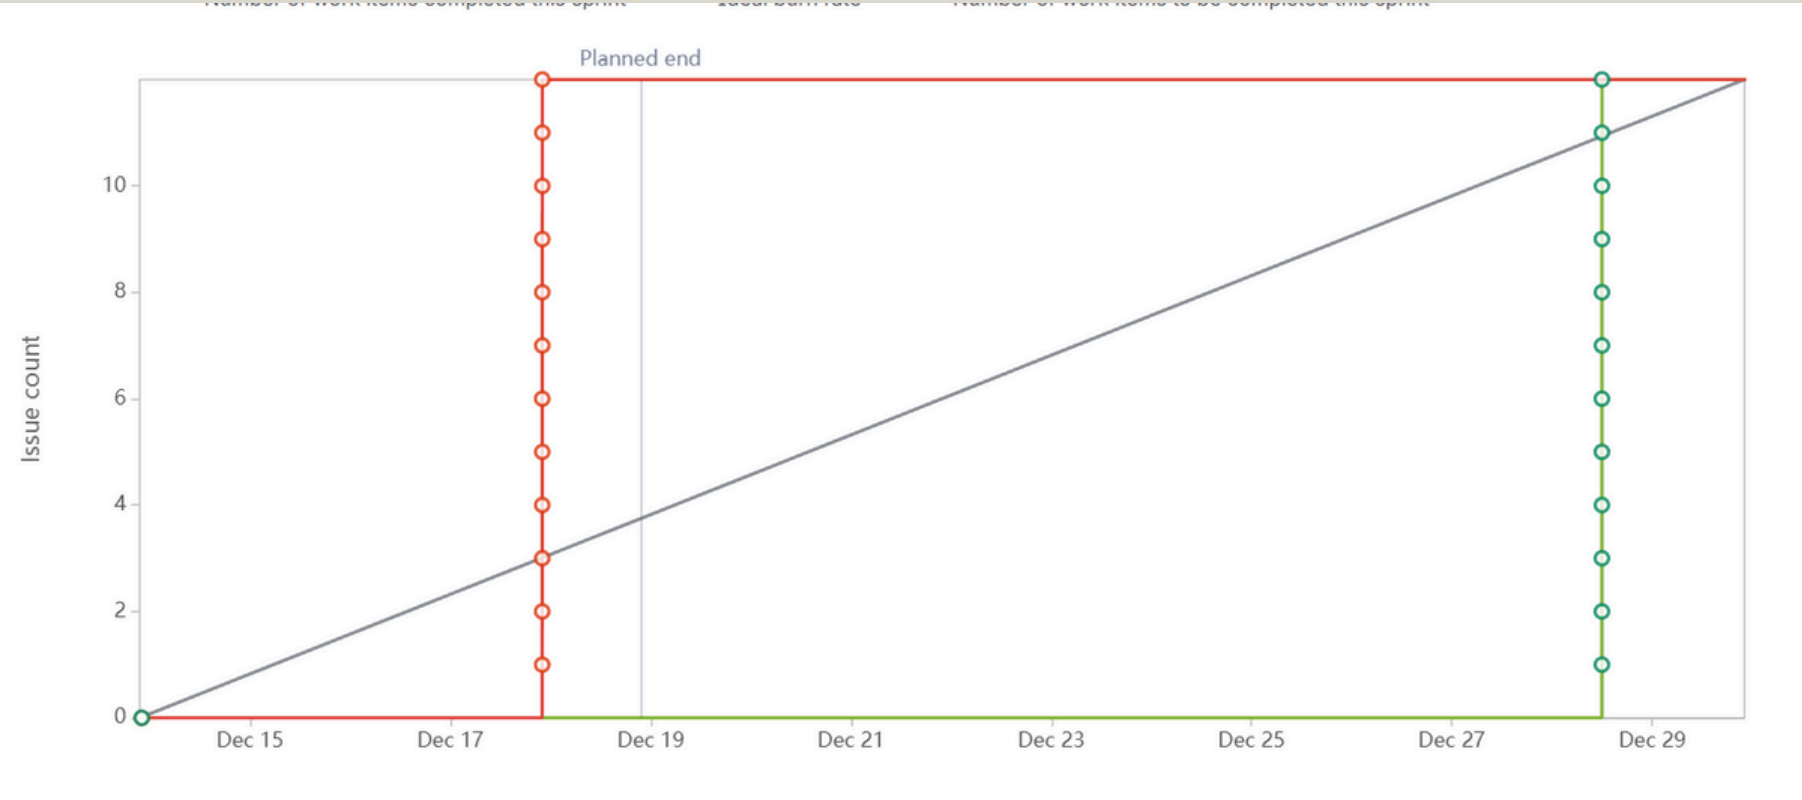

- Craftyfy is an e-commerce web application for handmade craft products.
- The application allows users to browse, search, and purchase products online.
- Only user-side functionalities are tested in this project.
- Key user features tested include login, product listing, cart, and checkout.
- Admin modules are out-of-scope.

MANUAL TESTING

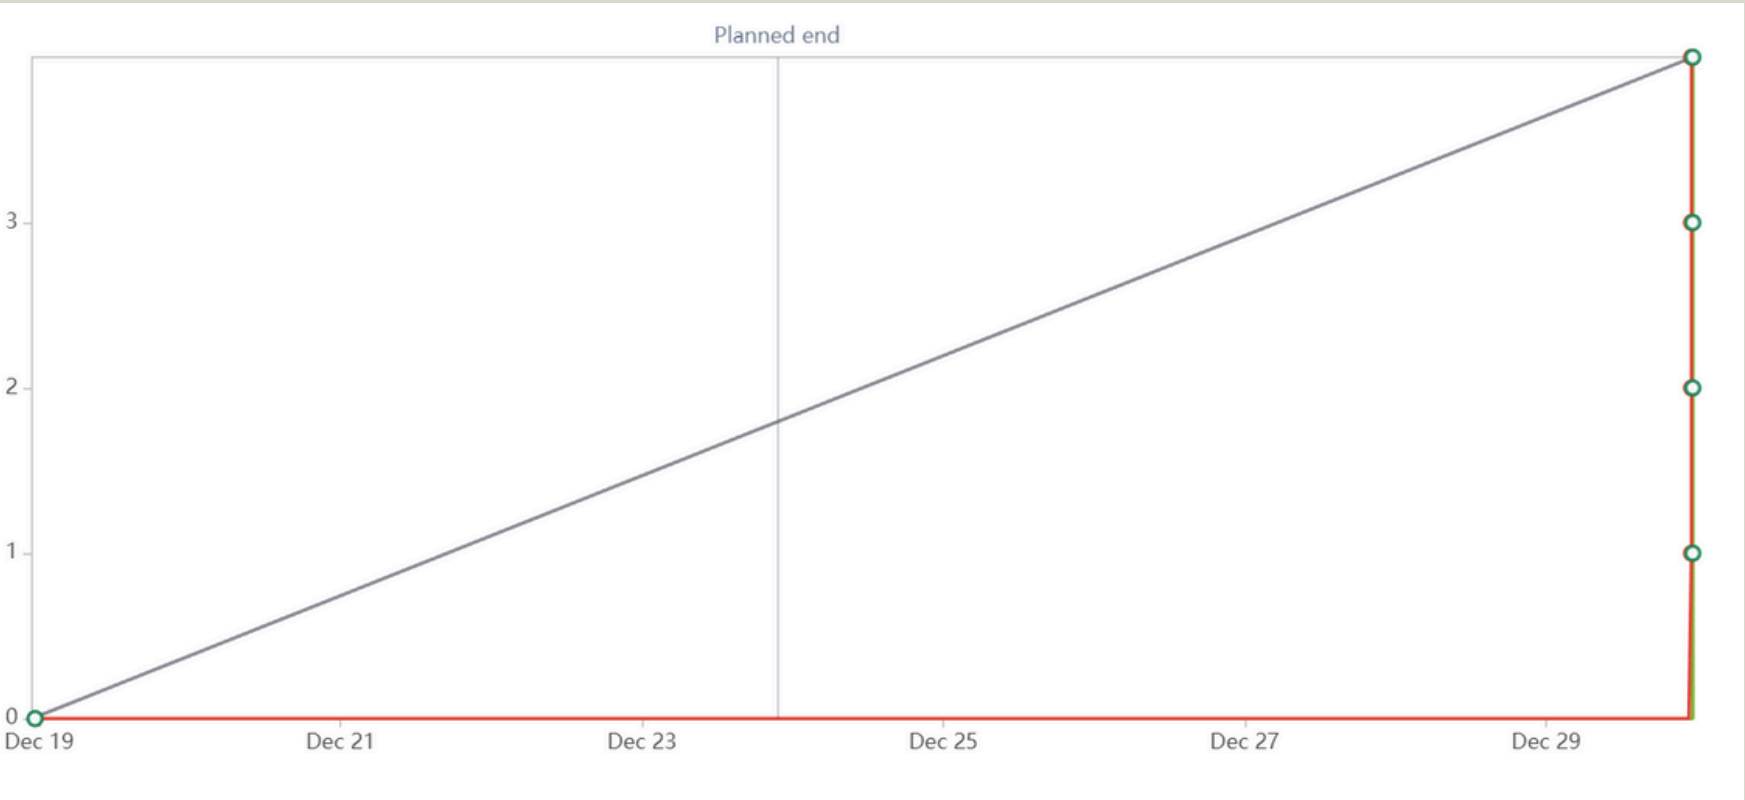

- Test Plan defining scope, approach, and test strategy.
- Test Scenarios and detailed Test Cases for user flows.
- Requirement Traceability Matrix to ensure maximum test coverage
- Manual tests for Login, Product Listing, Cart, and Checkout.
- Identification and Reporting of defects with severity and priority.
- TestRail for Test Management and Report Generation.
- Ensuring application stability before starting automation.

PROJECT TRACKING USING JIRA

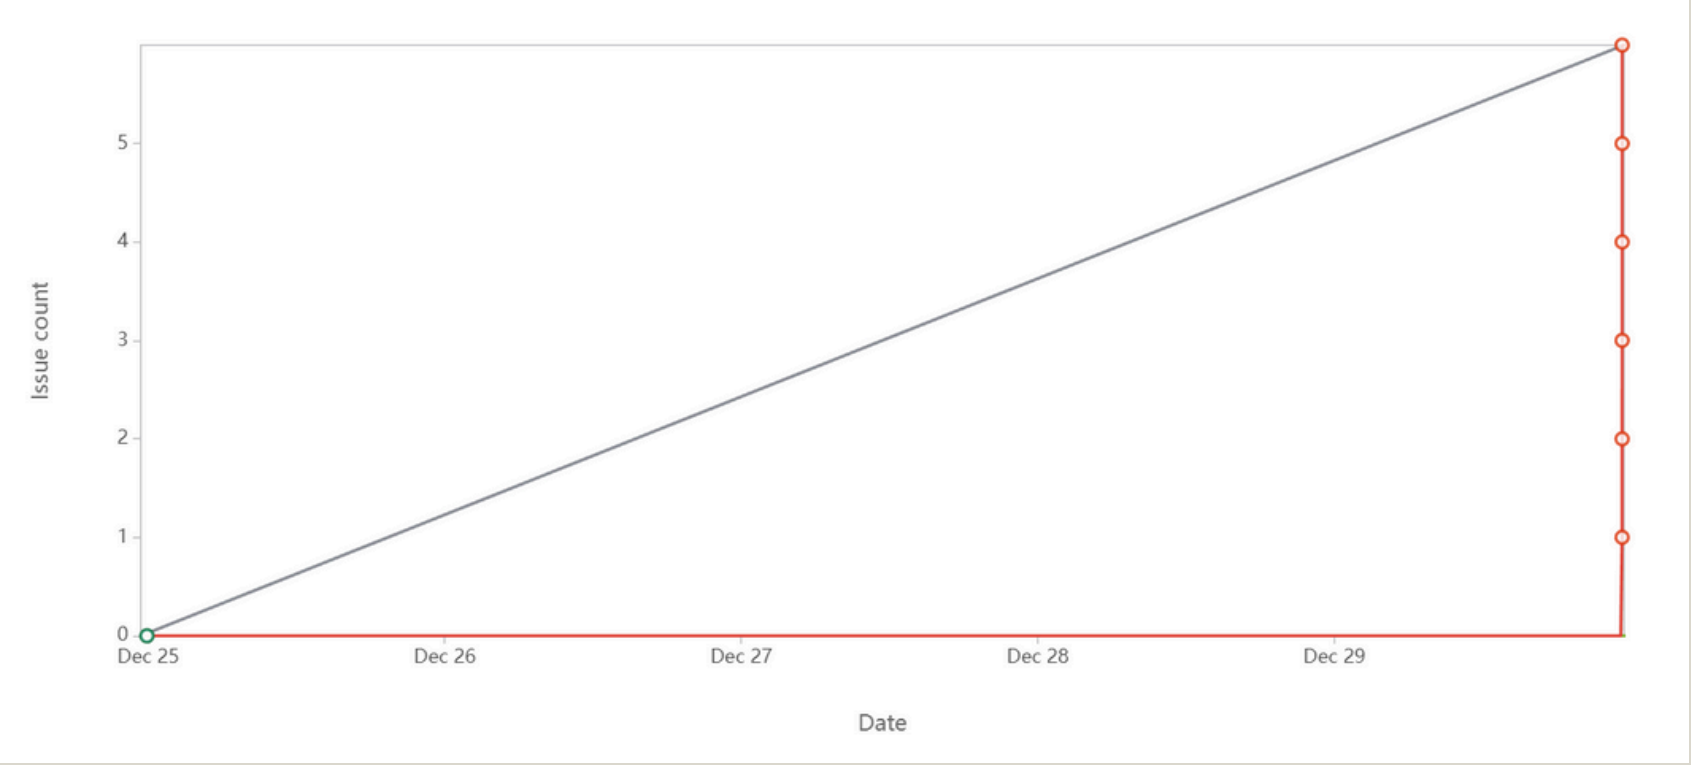

- User stories grouped under Epics for major functionalities.
- Work planned and tracked under Sprints
- Defects logged with their priority and steps to reproduce.
- Zephyr for creating and organizing test cases into test cycle.

Sprint 1

Sprint 2

Sprint 3

AUTOMATION TESTING

- Automation framework developed using Selenium with Java .
- TestNG Annotations used for test executions.
- Framework follows Page Object Model (POM) design pattern for code resuability.
- Maven used for dependency and build management.

FRAMEWORK STRUCTURE

```
|
|— src/test/java
|   |— base      → Driver & test base setup
|   |— listeners → TestNG listeners (screenshots on failure)
|   |— pages     → Page Object Model classes
|   |— testcases → Test classes
|   └─ utility   → Excel & Screenshot utilities
|
|— src/test/resources
|   |— LoginData.xlsx
|   └─ config.properties
|
|— target
|   └─ screenshots → Failure screenshots
|
|— test-output
|   └─ junit-reports
|
|— pom.xml
|— testng.xml
└─ README.md
```

AUTOMATION WORKFLOW

- TestNG triggers test execution and testng.xml defines the test classes and execution order.
- Browser setup and teardown using TestBase class.
- Test scenarios in Test classes written using TestNG annotations.
- Page methods interact with the UI.
- Assertions validate the expected results.
- Test Failures captured by Listeners and screenshots are taken.

JENKINS INTEGRATION

- Continuous Integration (CI) of automation tests.
- Pipeline job configured and connected to GitHub repository.
- GitHub Poll SCM for automated builds.
- Monitoring test execution through Jenkins console output
- Archives test reports and stores them under build artifacts.

Pipeline Script

```
pipeline {
  agent any

  tools {
    jdk 'JDK_Home'
    maven 'Maven'
  }

  stages {

    stage('Checkout Code') {
      steps {
        git branch: 'master',
          url:
'https://github.com/samithaaa/craftyfy-project.git'
      }
    }

    stage('Build & Run Tests') {
      steps {
        catchError(buildResult: 'SUCCESS', stageResult: 'FAILURE')
{
          bat 'mvn clean test'
        }
      }
    }

    stage('Archive Test Results') {
      steps {
        junit 'test-output/junitreports/*.xml'
      }
    }

  }
}
```

DOCKERIZATION

- Dockerfile to define the automation test environment with base image and required runtime dependencies.
- Headless browser execution for non-UI environments.
- Docker image built using docker build command.
- Image name and tag for versioning.
- Executed automation tests using docker run.

```

CLOUD EXECUTION

- AWS EC2 instance for remote execution
- Host Jenkins on cloud server
- Installation of Git, Maven and Chrome
- Execution of tests in headless browser mode.
- Improves reliability compared to local execution
- Scalable execution approach

CHALLENGES AND LEARNINGS

- Handling Dynamic UI Elements
- Environment Dependency Issues
- Managing Test Execution Order
- Handling Test Failures Without Breaking Pipeline
- Real automation stability issues revealed by CI
- End-to-end Workflow Thinking

THANK YOU
